Quick Quiz: Nov 2

Name: _____

Question 1

For each set of 3 lengths, determine if the triangle is acute, right, obtuse, or impossible.

- 8, $\sqrt{5}$, 11

- 3, 4, $2\sqrt{6}$

- 5, $6\sqrt{2}$, 10

Question 2

Given coordinates of triangle vertices, apply the given transformation by graphing the preimage and image. Label the vertices of the preimage with A, B, and C, and label the vertices of the image with A', B', and C'.

- Preimage coordinates are $A(-2,-1)$, $B(3,-1)$, and $C(0,2)$. Apply a translation by vector $[5,-1]$ to produce the image.

- Preimage coordinates are $A(0,0)$, $B(3,1)$, and $C(2,4)$. Apply a reflection over the line $x=-1$.
