1. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

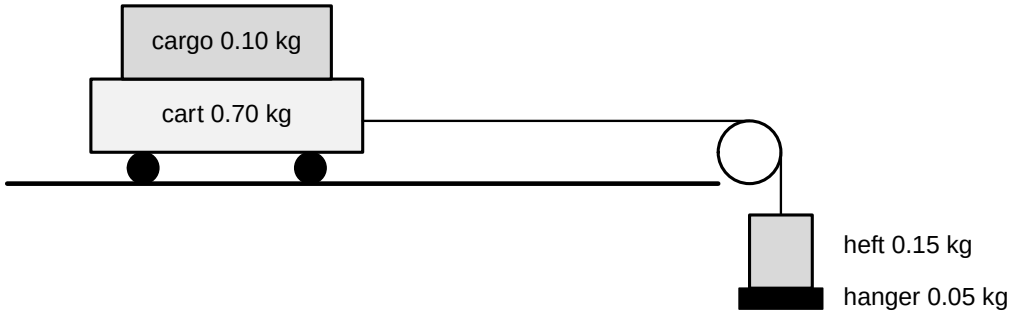

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

2. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

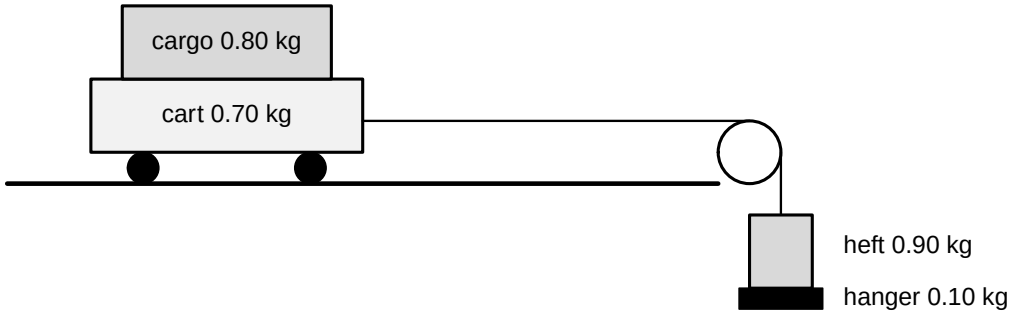

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

3. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

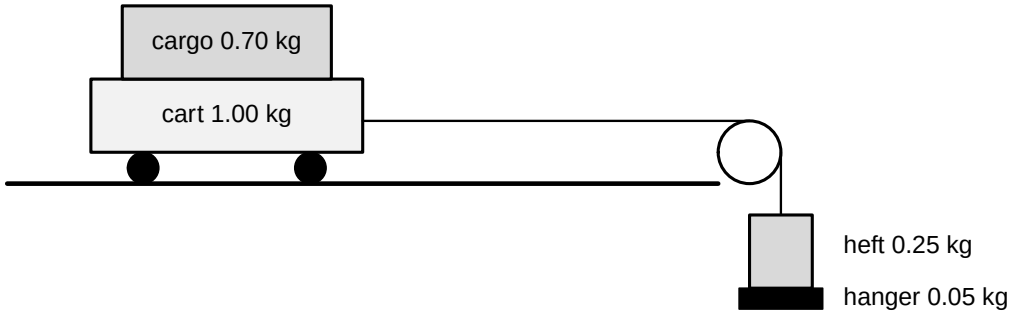

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

4. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

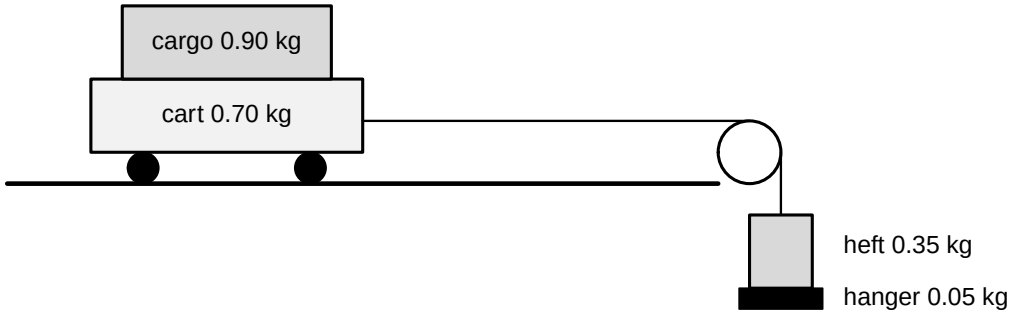

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

5. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

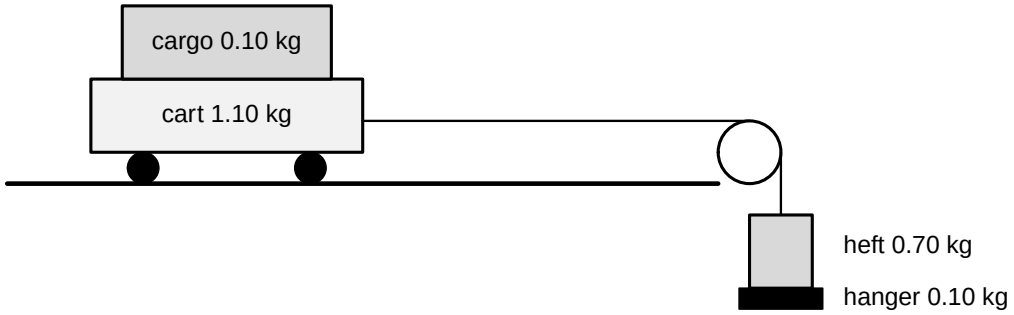

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

6. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

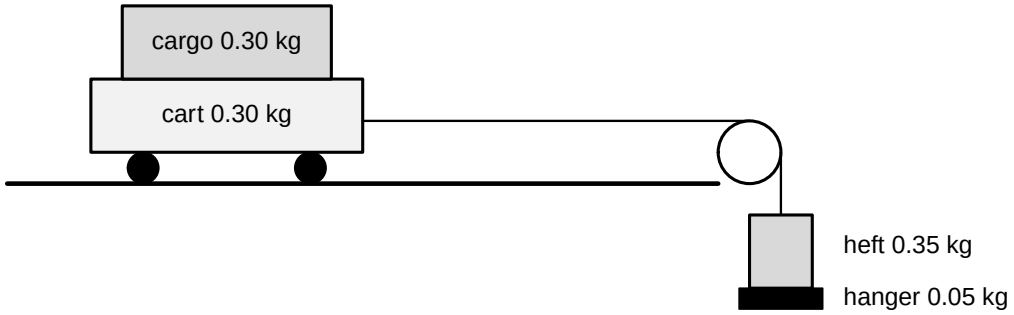

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

7. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

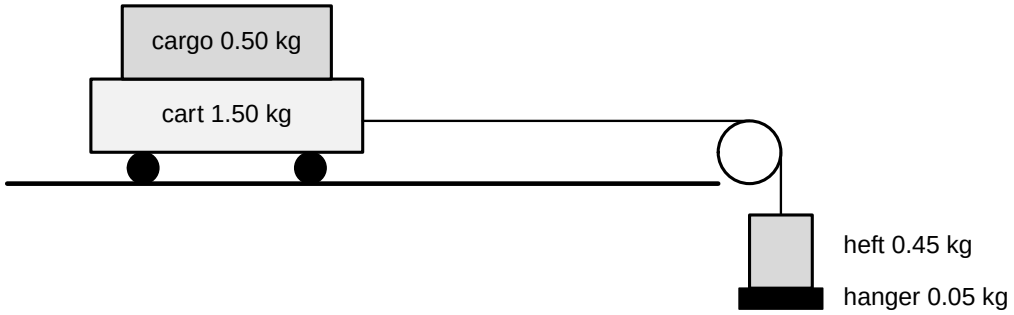

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

8. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

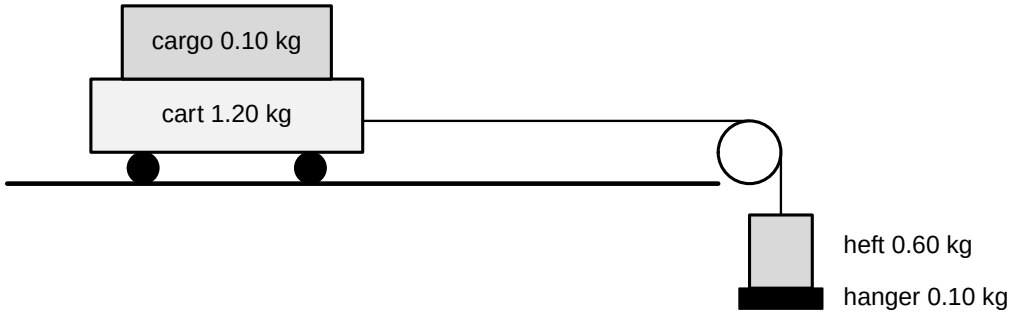

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

9. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

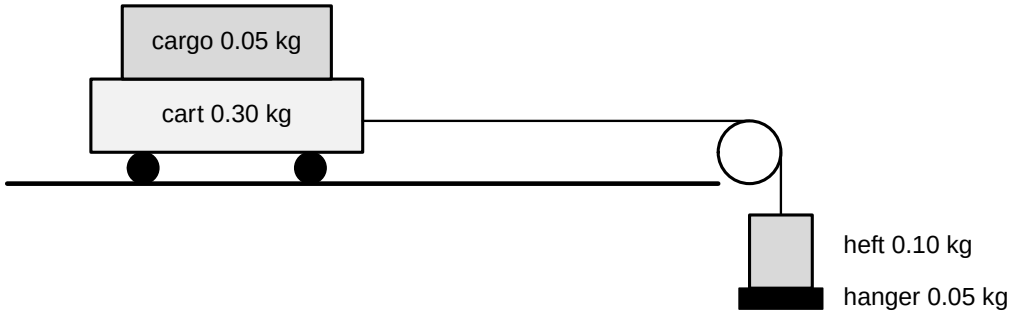

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

10. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

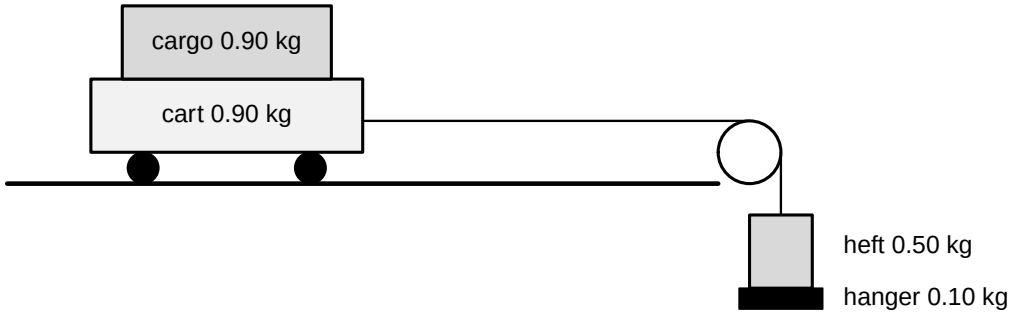

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

11. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

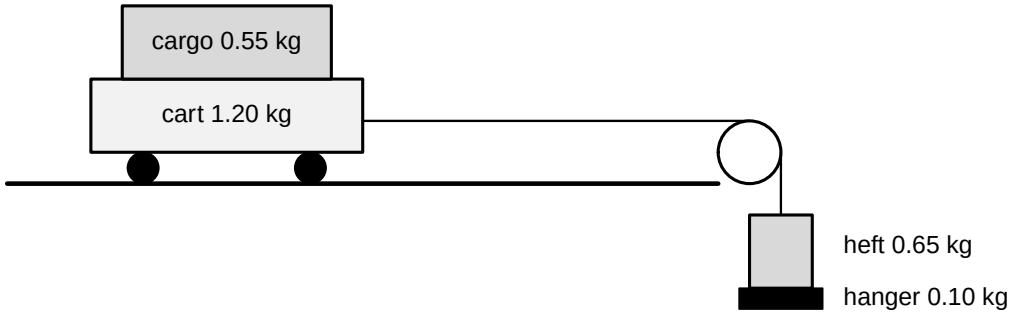

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

12. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

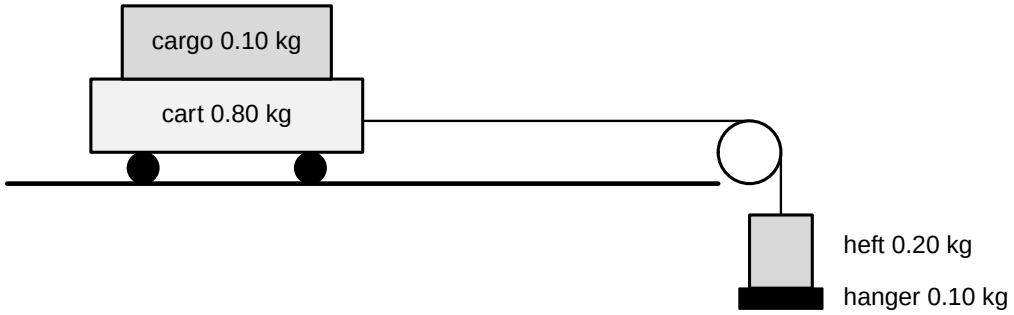

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

13. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

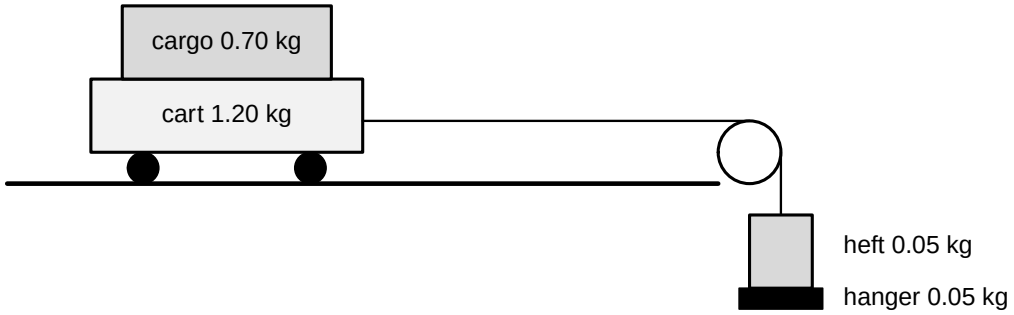

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

14. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

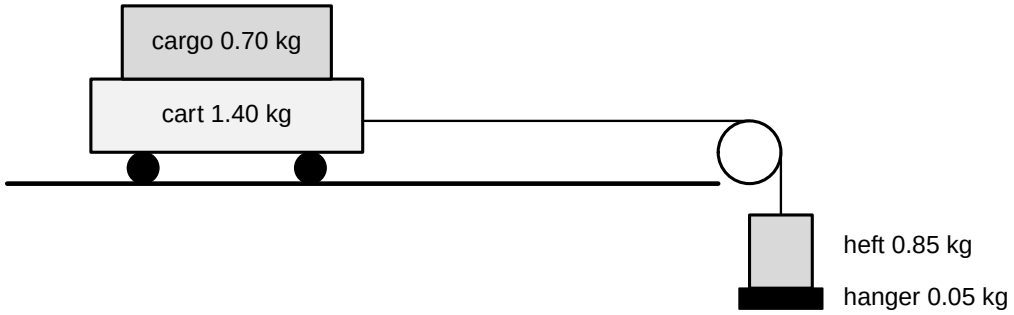

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

15. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

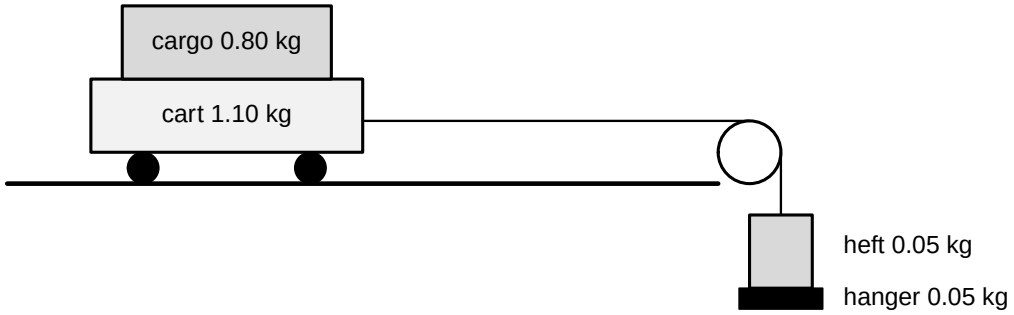

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

16. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

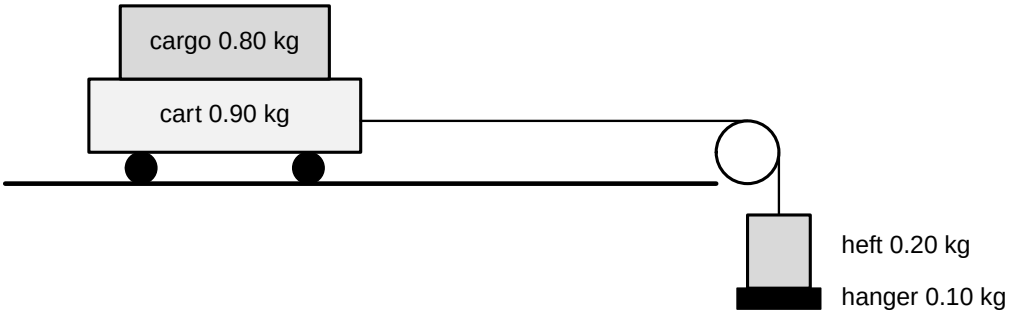

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

17. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

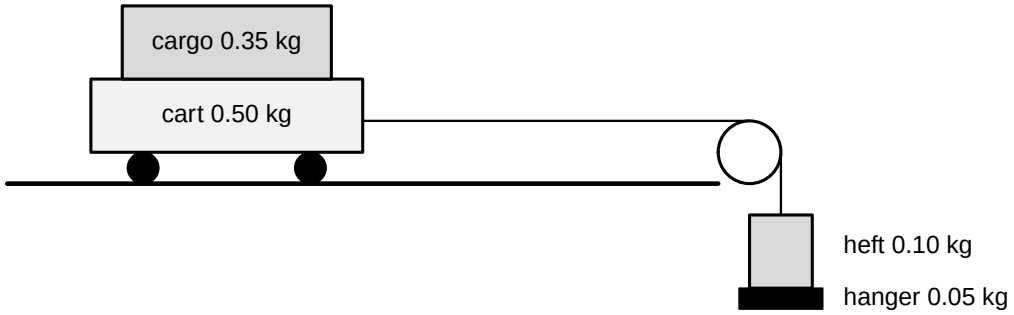

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

18. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

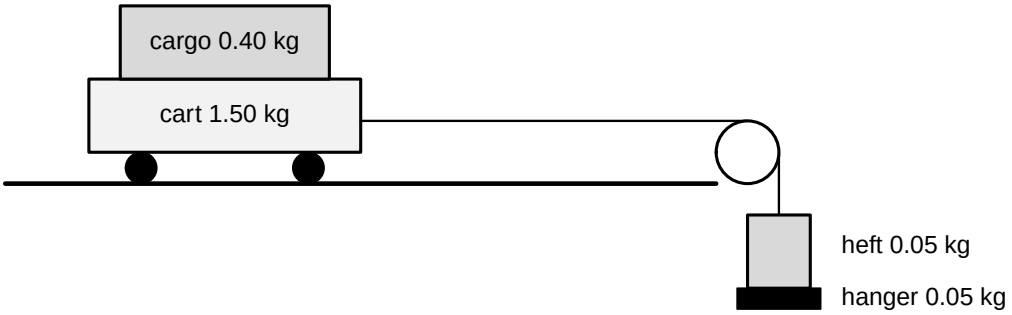

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

19. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

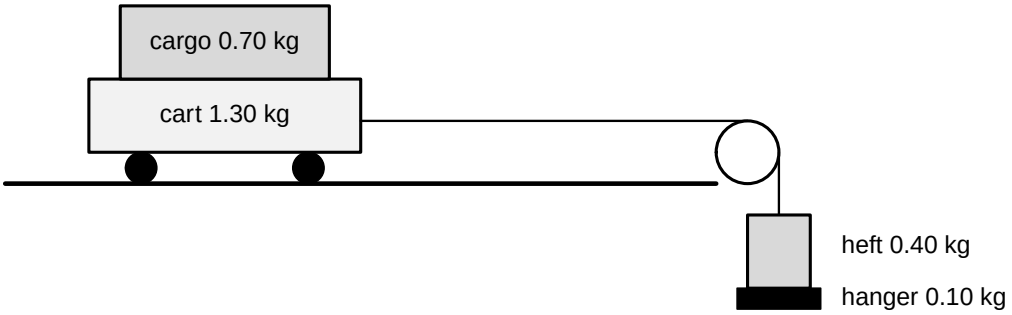

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

20. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

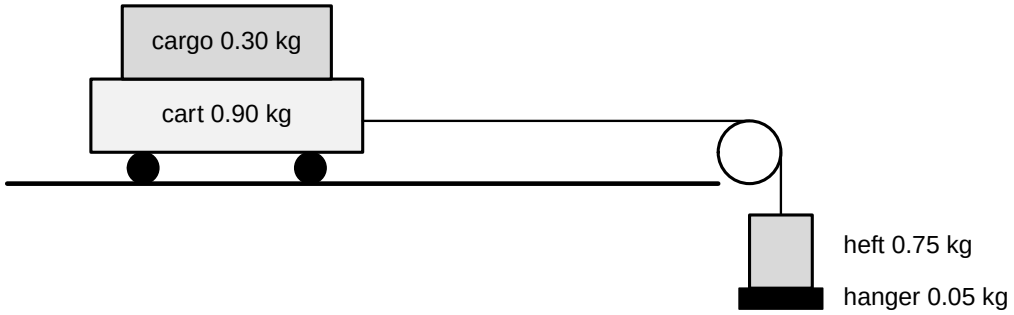

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

21. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

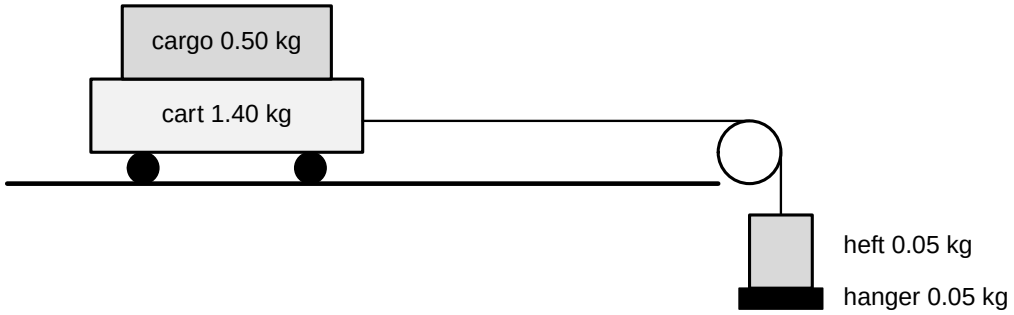

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

22. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

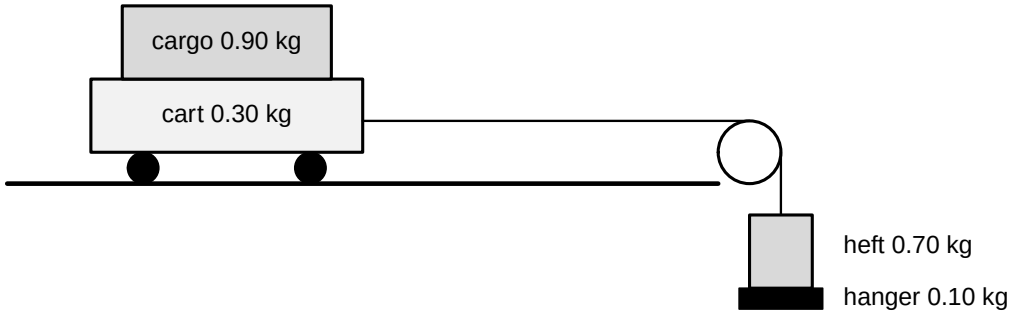

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

23. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

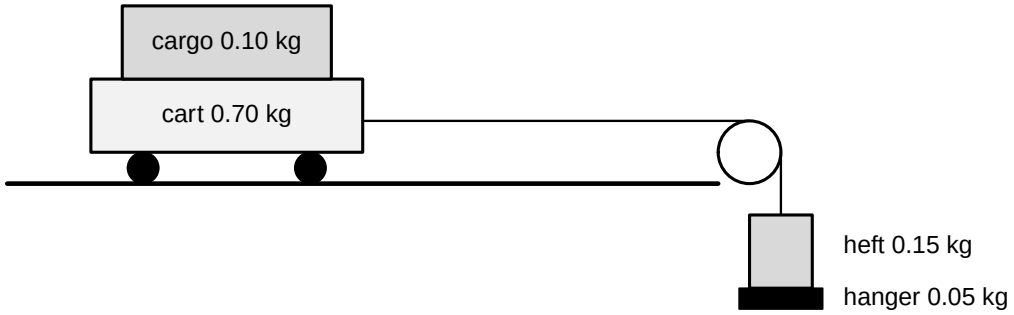

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

24. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

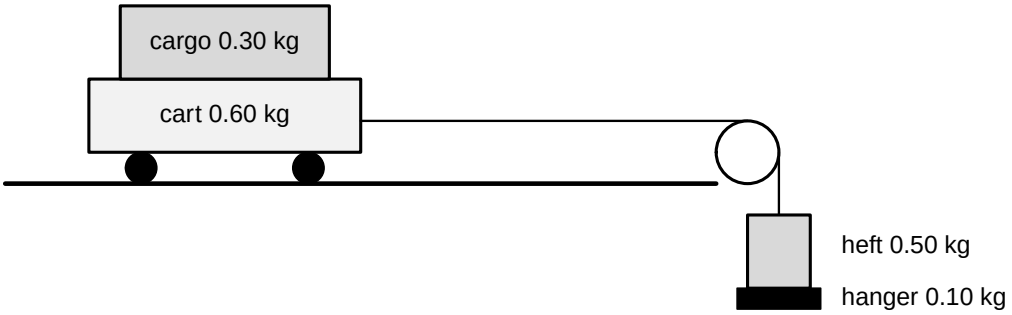

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

25. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

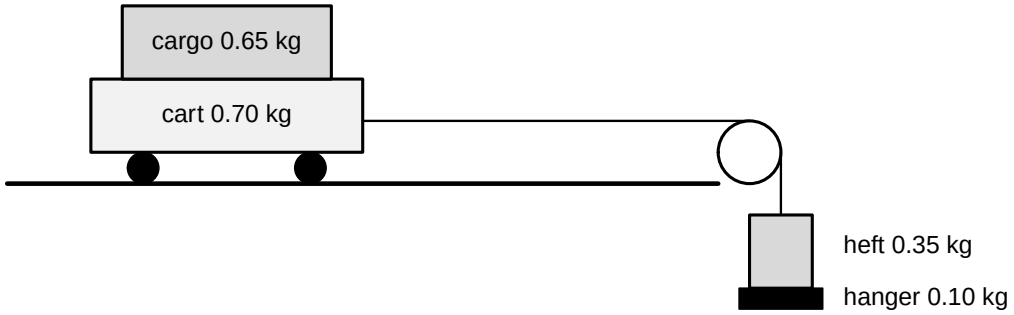

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

26. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

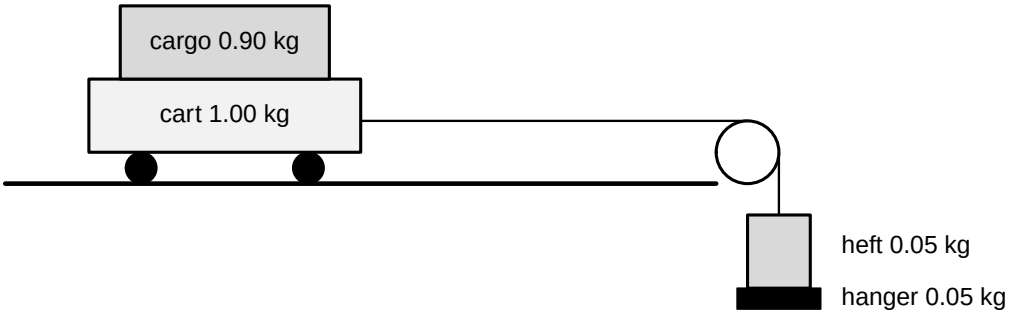

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

27. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

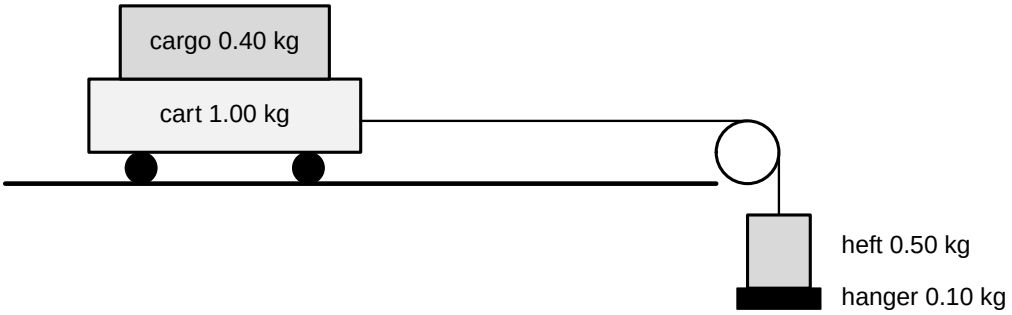

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

28. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

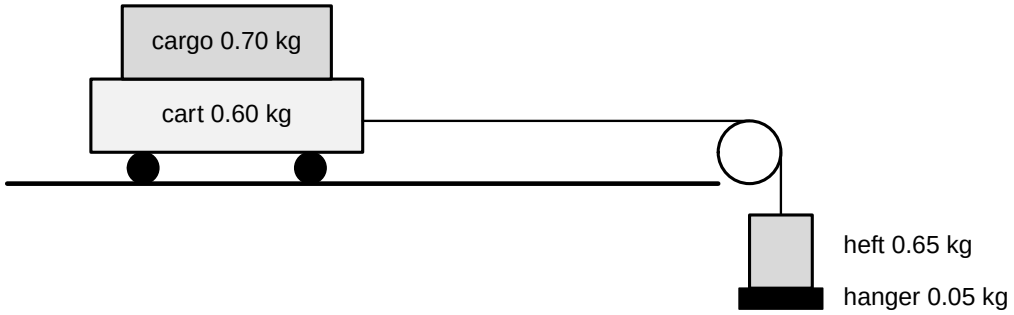

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

29. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

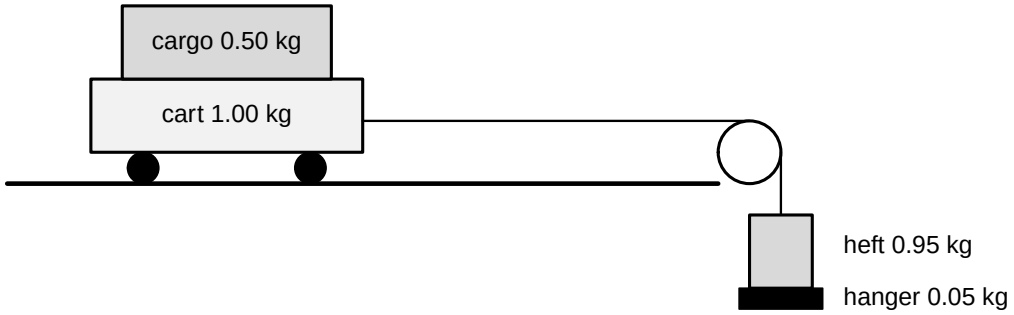

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

30. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

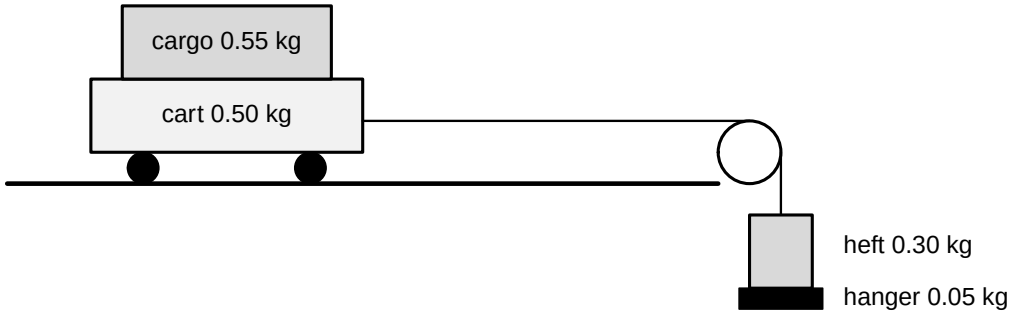

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

31. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

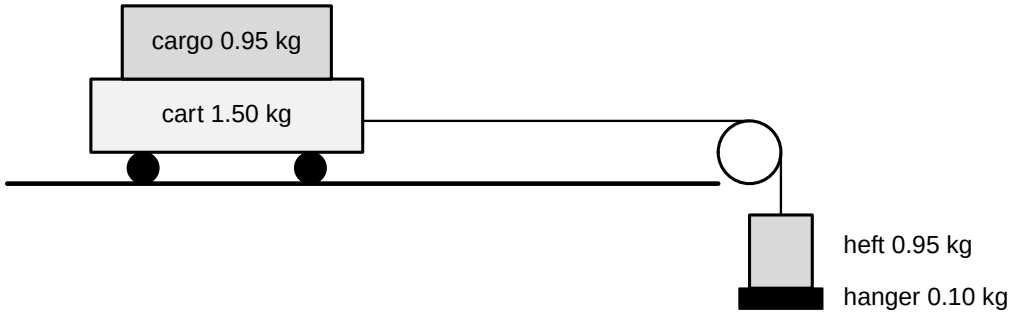

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

32. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

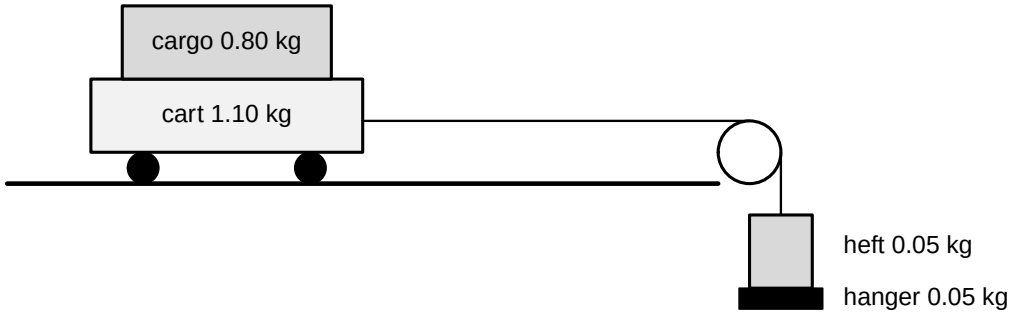

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

33. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

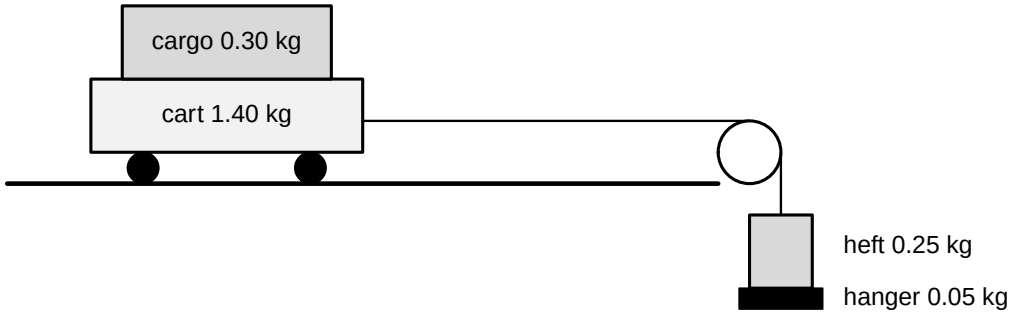

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

34. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

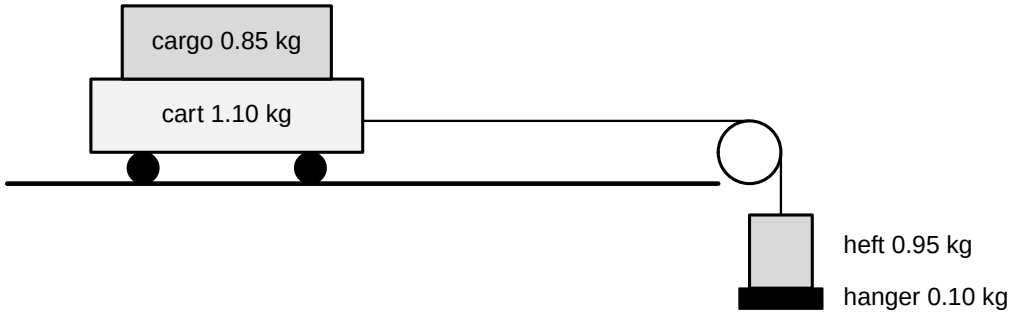

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

35. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

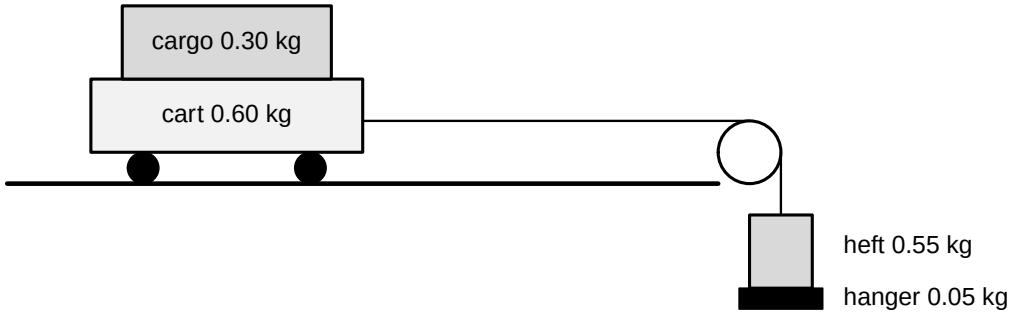

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

36. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

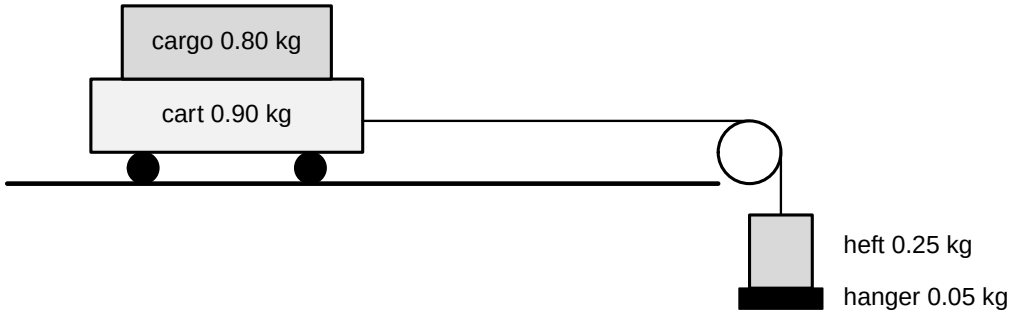

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

37. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

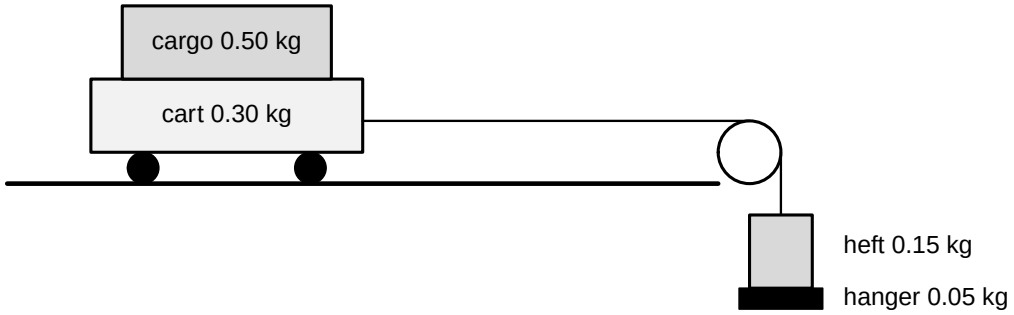

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

38. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

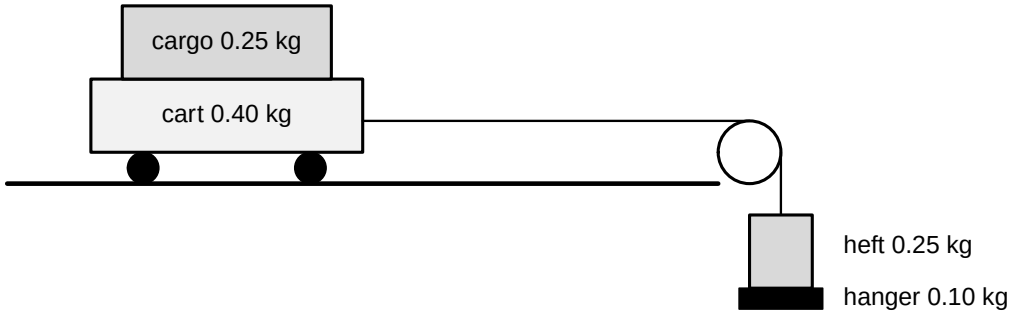

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

39. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

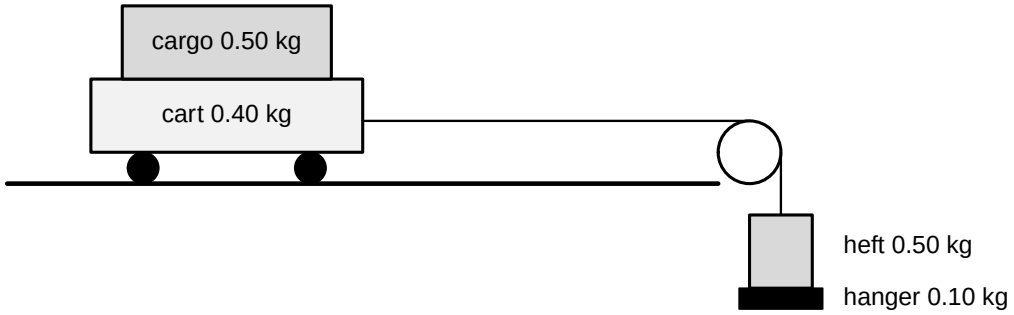

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?

40. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.

What is the forward force (include units!)?

What is the total mass (include units!)?

What is the acceleration of the cart (include units!)?
