1. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

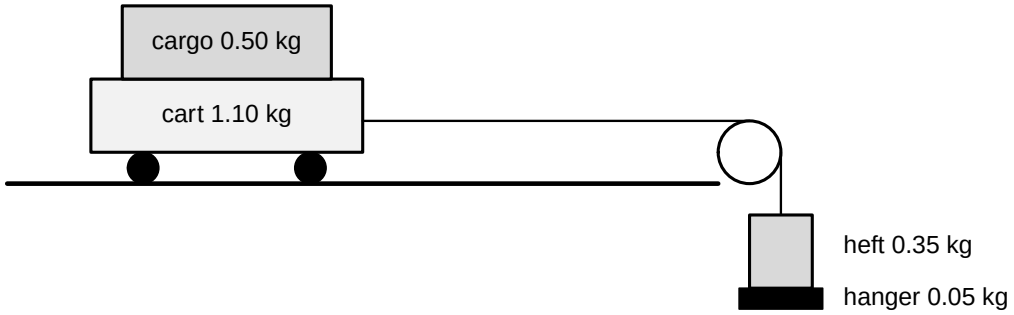

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

2. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

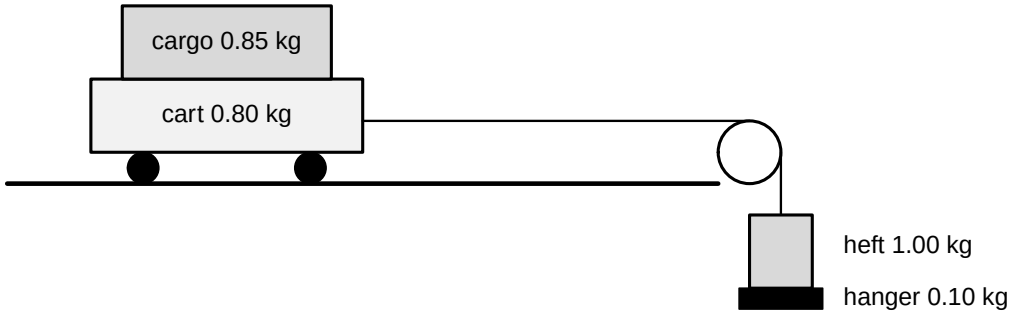

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

3. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

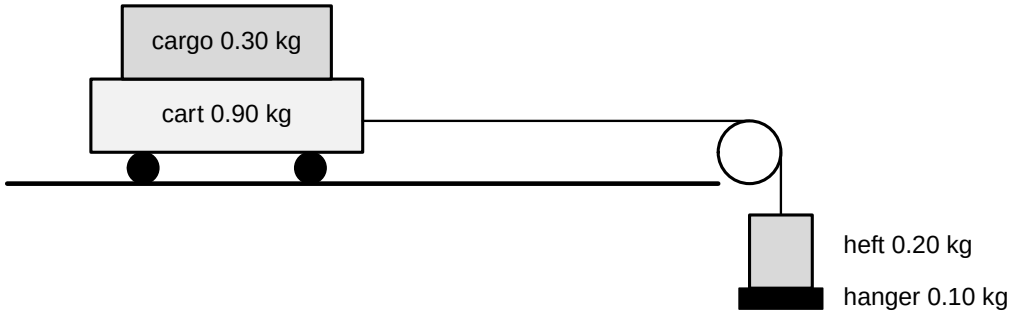

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

4. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

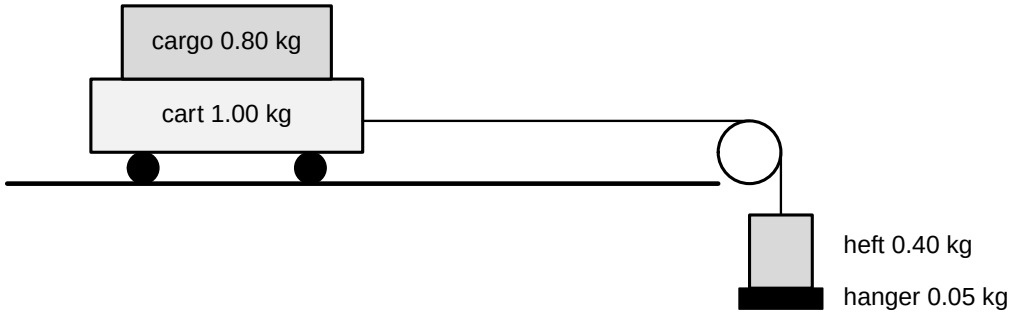

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

5. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

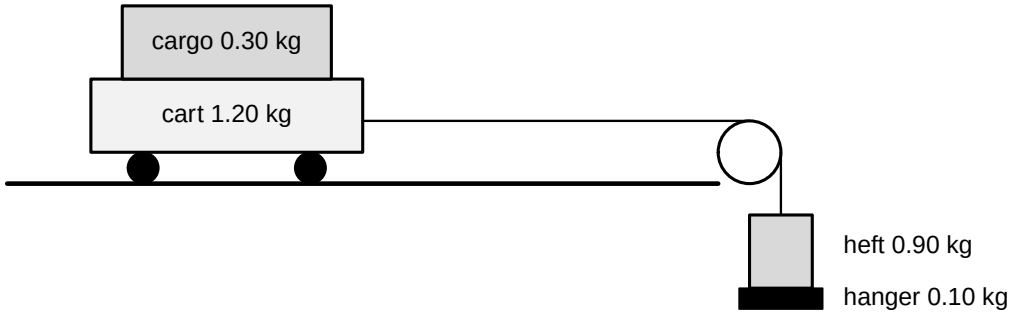

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

6. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

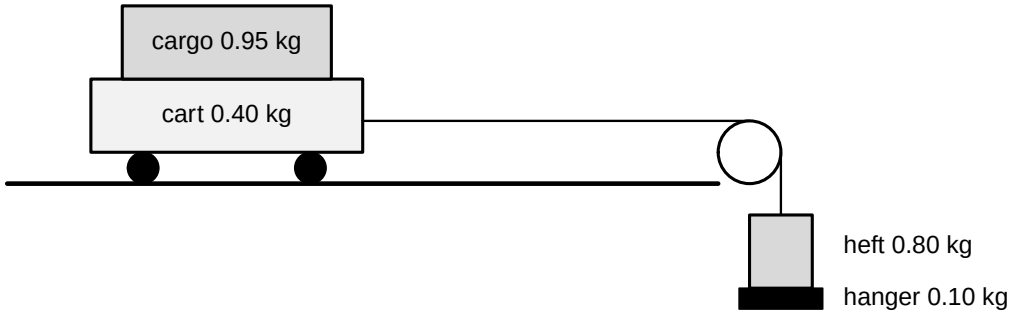

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

7. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

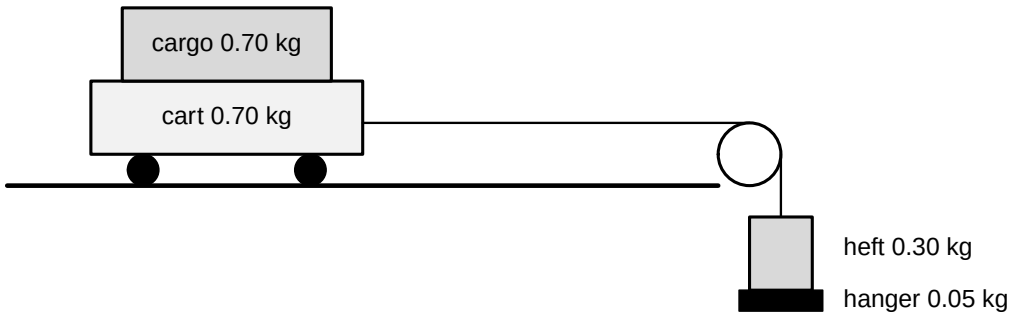

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

8. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

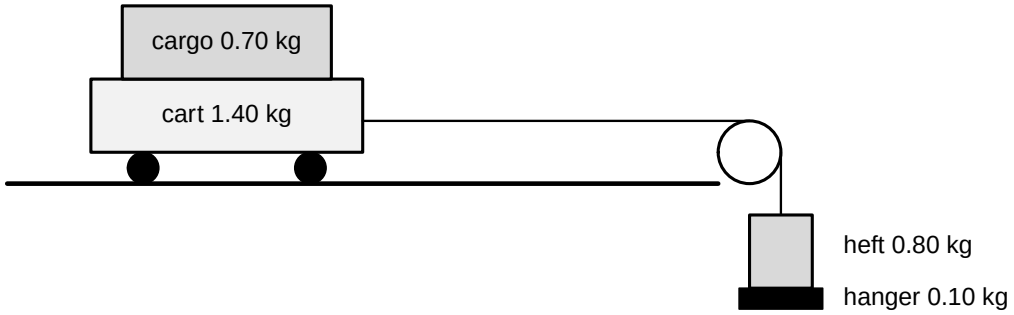

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

9. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

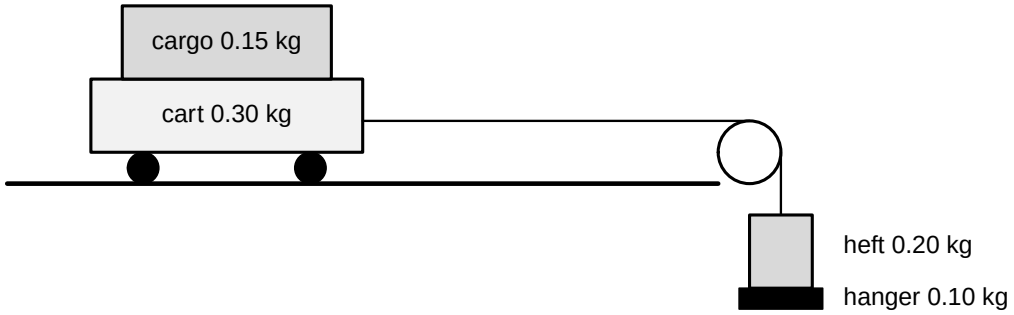

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

10. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

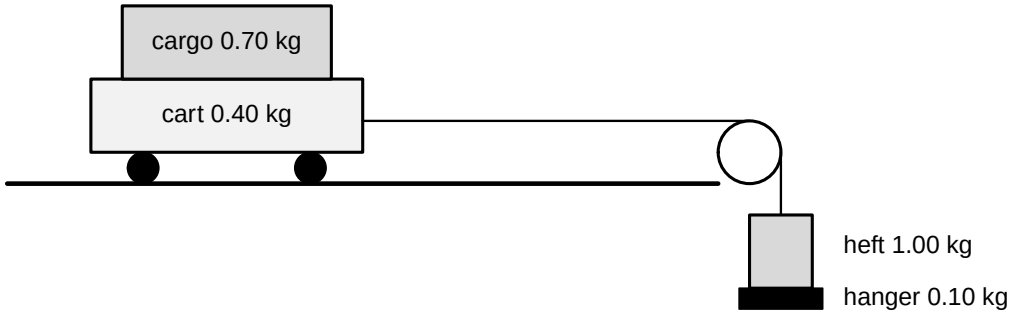

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

11. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

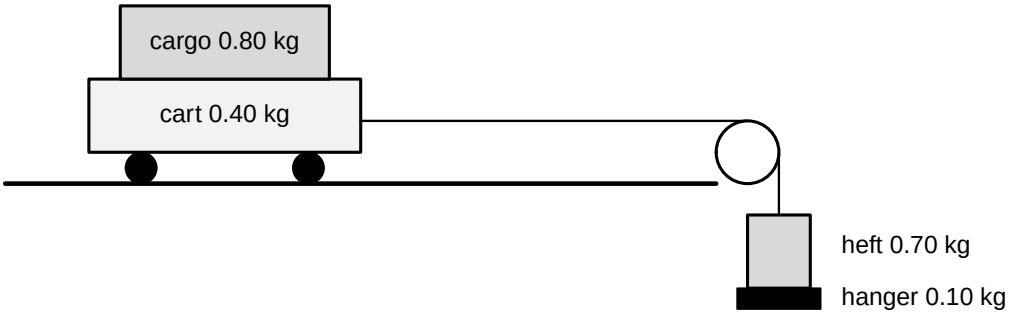

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

12. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

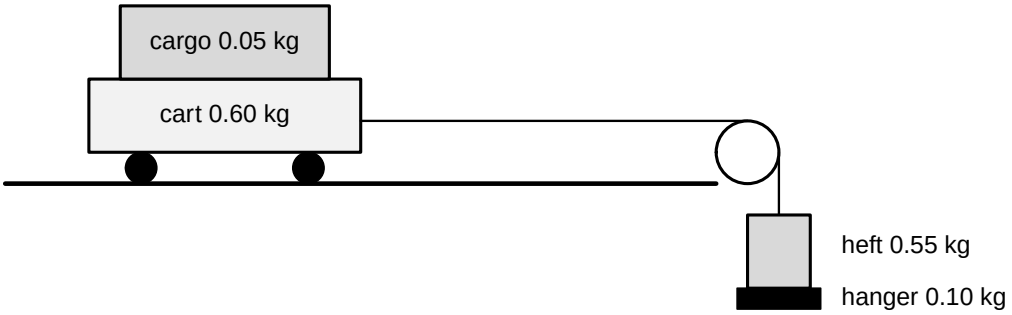

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

13. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

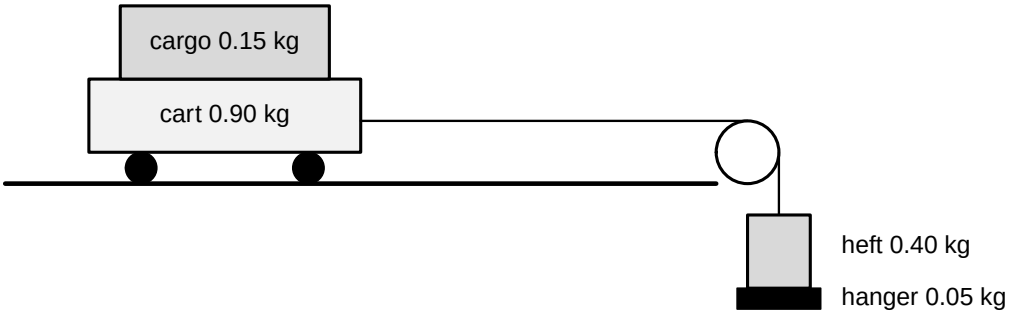

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

14. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

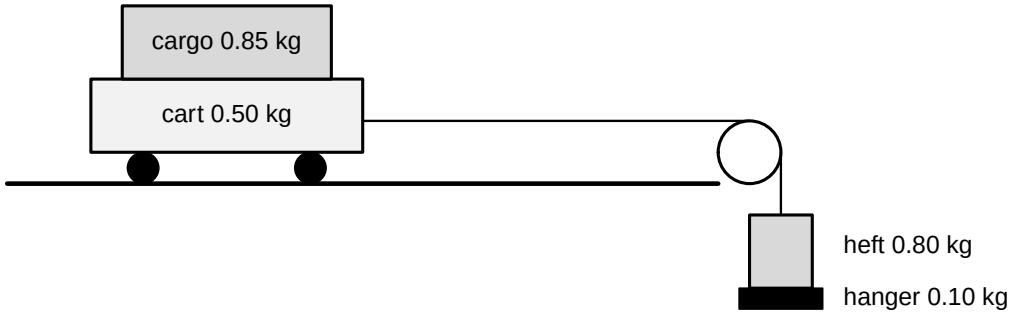

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

15. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

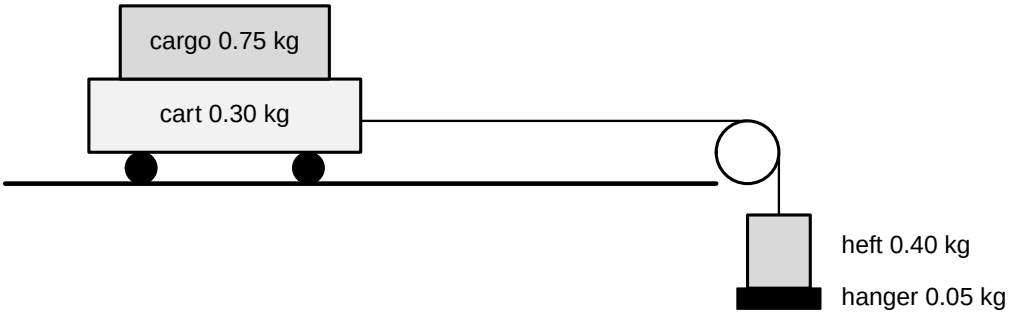

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

16. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

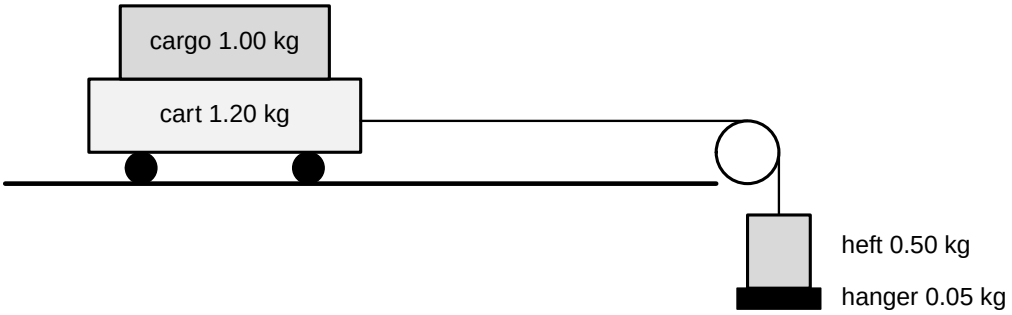

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

17. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

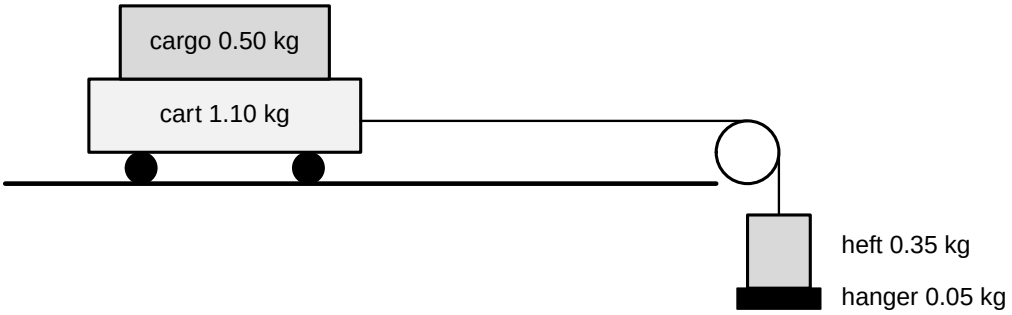

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

18. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

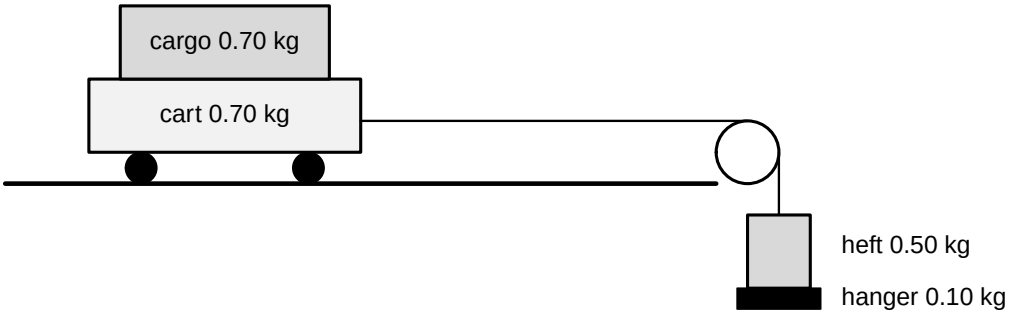

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

19. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

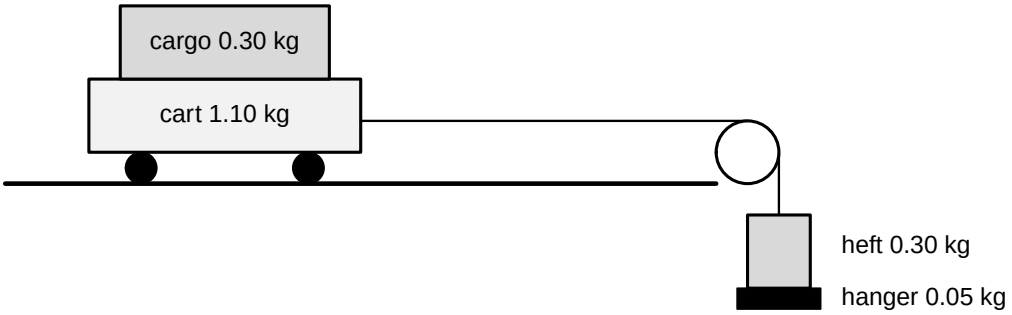

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

20. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

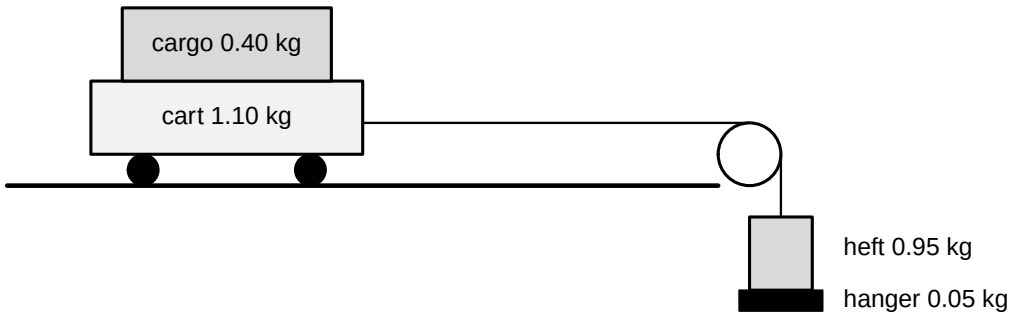

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

21. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

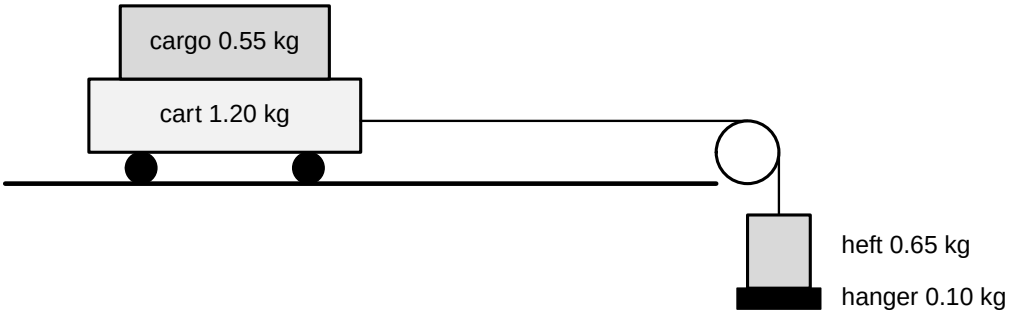

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

22. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

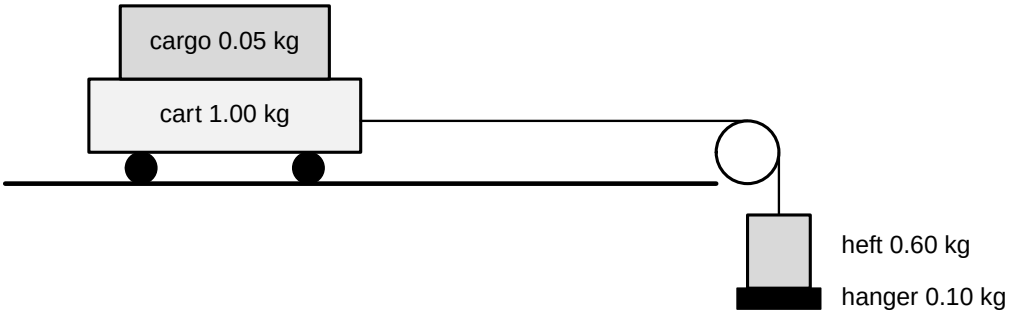

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

23. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
- The **total mass** being pushed forward is made of all four masses: cart, cargo, hanger, and heft.
- Remember units in your answers!

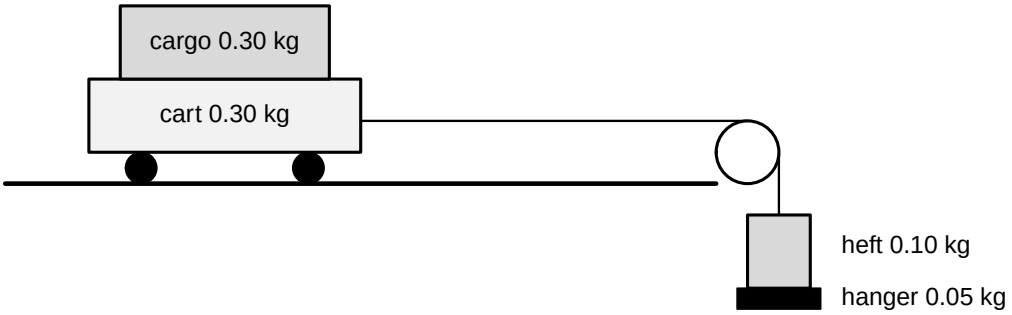

What is the forward force?

What is the total mass?

What is the acceleration of the cart?

24. Name:

A cart is pulled along a level track by a string that runs over a pulley to a hanger. Some mass (cargo) rides on the cart, and some mass (heft) sits on the hanger. Ignore friction and the mass of the string.

- The **forward force** is the weight of the hanger plus the heft.
- Weight is found by multiplying mass by 10 N/kg.
